DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11-22-2002 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 6-349663. The '663 patent teaches the apparatus and method of a screen printing plate as claimed including a screen plate 11 having two or more print patterns disposed thereon each having a plurality of mesh holes. The mesh hole sizes of the two print patterns are clearly different from each other. See Figs. 1-4 in the '663 patent for details. With respect to claims 6 and 11, the method of making an electronic device with the above screen plate as claimed is certainly disclosed in the '663 patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2854

Claims 5 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the '663 patent in view of Sanyal et al(4,872,261). The '663 patent may not show clearly that the mesh holes closer to the periphery of the stencil frame are larger than the mesh holes near the center of the stencil frame. The patent to Sanyal et al teaches in a similar stencil for applying solder paste to a PC board providing mesh holes 36 closer to the periphery of the stencil larger than the mesh holes 40 near the center of the stencil. See Fig. 2 and column 6, lines 28-32 in Sanyal et al for example. It would have been obvious to one of ordinary skill in the art to provide the stencil of the '663 patent with mesh hole sizes arranged as taught by Sanyal et al when the design of the PC board calls for the electronic components to be mounted in a particular way.
